

Topic: Integrate 101companies and StackOverflow

- ▶ **Motivation:** 101companies is one of many community resources-- next to Wikipedia, Rosetta Code, StackOverflow, GitHub, etc. All such resources are presumably complementary and ideally they were fully integrated so that any resource is discoverable and navigatable from any other resource. The present topic focuses on the integration of 101companies with StackOverflow.
- ▶ **Objective:** Means of integration have to be identified. (How to support 101companies listing on StackOverflow? How to do useful data mining on StackOverflow for presentation on 101companies?) StackOverflow features with reuse potential in 101companies have to be identified. (How to, for example, leverage StackOverflow's voting and discussion in 101companies?)
