

# Topic: Technology study on semantic wikis

- ▶ **Motivation:** 101wiki of 101companies levels close to a semantic wiki in that certain conventions are used to document semantics of documentation. For instance, designated sections of 101implementation pages 'list' exercised languages, exercised technologies, and implemented features. However, many links are semantically weak. For instance, the motivation section links to concepts without semantic distinction.
- ▶ **Objective:** It is clear that there are proper semantic wiki systems that could be of interest hence. We should know these systems, their capabilities, their tradeoffs. We should think about a possible migration path towards a suitable semantic wiki system or about the feasibility of adding proper semantic wiki capabilities to the existing 101wiki stack.
